Description:

<https://iuceedotcom.files.wordpress.com/2016/04/learning-styles-abstract.pdf>

A study was undertaken to determine the learning styles of students pursuing master's degree programmes in engineering. Index of Learning Style was administered to 175 students. The findings reveal that there exist differences in learning styles of students pursuing master's degree in computer science and engineering, civil engineering, electrical engineering, electronics and communication engineering and mechanical engineering.

Majority of the students of various branches except mechanical engineering prefer active, sensing, visual and sequential learning styles but very few of them have strong preference for a particular learning style. Surprisingly, the findings indicated that all except one student, have moderate or strong preference for visual learning style. One can argue that digital era in which youngsters are living may be one of the reasons for preference for visual learning styles. The webinar would focus on clarifying the concept of learning styles, share the findings of the study undertaken and implications for teaching learning.

Presenter:

Prof. (Dr) PK Tulsi
Education & Educational Management Department,
NITTTR, Chandigarh
